ACA RoQ measures roll hardness profiles, which are used to troubleshoot and optimize roll making, converting and finishing processes.

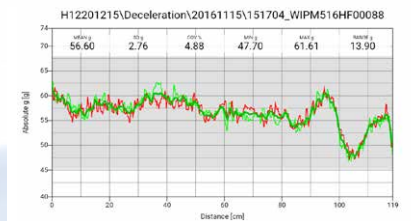

ACA RoQ has unique features such as embedded touch screen, Wi-Fi and built-in barcode reader. It's unique technology provides very accurate measurement including flexible data transfer and storage.

Benefits

- Cost savings through less roll quality complaints
- Identification of roll errors such as bagginess, rope marks, wrinkles and soft edges
- Process control based on information of high resolution profiles (Caliper variations are far too small to be picked by online scanners or test labs)
